WHAT ARE TENSION FABRIC SYSTEMS

Tension fabric systems are a **lightweight graphic display systems** which is almost **limitless in size** and is the perfect choice for a multitude of venues and applications.

Tension fabric systems are part of a **new generation of display solutions** that allow the **simple fitting and removal of fabric graphics**. They are modular in design and are available in a range of standard sizes or can be built to meet clients specific requirements.

Tension Fabric Systems provide an exciting method of advertising and displaying information. Due to its lightweight design, graphics can be curved, hung or even made into a walk through archway. **Your marketing message will be hard to ignore.**

TENSION
FABRIC SYSTEM

TFS allows simple fitting and removal of tension fabric graphics.

Frames are simple to assemble using just one tool.

This versatile system can be either single or double sided. Displays can be freestanding, fit into existing system, wall mounted and even ceiling hung and available in a variety of fabrics. They can also be LED illuminated, ideal for darker inside areas or night time advertising.

Perfect for exhibition displays, retail displays, window displays, showrooms, reception and foyer areas in any sector or museum graphics

Flat-Faced Tension Fabric Systems are made to bespoke sizes with fabric graphics that easily insert into the channel of the aluminium profile, meaning you can change graphics incredibly quickly and as often as required

Portability - Easy transportation as graphics can be rolled up for travelling

Versatile, innovative and lightweight.

Eco friendly - TFS are made from pvc material hence can be re-usable
